

NDNCERT-v2: Debug, Deploy, Dominate

- Motivation
 - NDNCERTv2 test server was up/down/up/down, we need to debug the problems and finally switch to it from the legacy system
 - The command-line client (and some client-side library) need to be improved; as well we need implementation of the client in other languages (python, javascript, java) to ease embedding it in applications
- Tasks
 - **Deploy, debug, deploy, and debug again NDNCERT-v2 server**
 - Implement PyNDN client
 - Implement ndn-js client
 - Implement jNDN client
- Requirements
 - **ndn-cxx**, PyNDN, jNDN, ndn-js
- Outcome
 - NDN testbed domination
